问题 1 利用行波法求解下列 Cauchy 问题

$$\begin{cases} \frac{\partial^2 u}{\partial t^2} = a^2 \frac{\partial^2 u}{\partial x^2}, & -\infty < x < +\infty, t > 0 \\ u|_{t=0} = \varphi(x) \\ \frac{\partial u}{\partial t}|_{t=0} = -a\varphi'(x) \end{cases}$$

问题 2 利用 D'Alembert 解的计算公式求解 Cauchy 问题

$$\begin{cases} \frac{\partial^2 u}{\partial t^2} = a^2 \frac{\partial^2 u}{\partial x^2}, & -\infty < x < +\infty, t > 0 \\ u|_{t=0} = \varphi(x) \\ \frac{\partial u}{\partial t}|_{t=0} = \phi(x) \end{cases}$$

1. $a = 1, \varphi(x) = 3e^{-x^2}, \phi(x) = 0$

2. $a = 3, \varphi(x) = 0, \phi(x) = xe^{-x^2}$

要求: 得到形式解 (即 D'Alembert 解) 后, 图示计算结果。
